DETAILED ACTION

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Jonathan Berschadsky (Registration No. 46,551) on September 5, 2008. The application has been amended as follows:

In the claims:

In claim 1, line 5, replace "digital signal" with --digital image signal--

In claim 1, line 7, replace "decoded digital signal" with --digital image signal decoded--

In claim 1, line 12, replace "final user." with --final user, wherein the rate information is represented in the form of a graph illustrating the size of a decoded image as a function of the number of quality layers, and wherein the perception quality information is represented in the form of a cursor illustrating the number of layers corresponding to each quality mode, displayed simultaneously with the decoded digital image signal.--

In claim 5, line 3, replace "digital signal" with --digital image signal--

In claim 8, line 5, replace "digital signal" with --digital image signal--

Cancel claims 9 and 10

In claim 11, line 2, replace "digital signal" with --digital image signal--

In claim 12, line 5, replace “digital signal” with --digital image signal--

In claim 12, line 7, replace “decoded digital signal” with --digital image signal decoded--

In claim 12, line 12, replace “final user.” with --final user, wherein the rate information is represented in the form of a graph illustrating the size of a decoded image as a function of the number of quality layers, and wherein the perception quality information is represented in the form of a cursor illustrating the number of layers corresponding to each quality mode, displayed simultaneously with the decoded digital image signal.--

Cancel claims 20 and 21

Reasons for Allowance

The following is an examiner’s statement of reasons for allowance: the essential difference from the prior art is defining, by a content creator, a predetermined number of quality modes each corresponding to a predetermined number of quality layers of the digital signal, on the basis of rate information provided via a graphical interface and perception quality information provided to the content creator, wherein the rate information is represented in the form of a graph illustrating the size of a decoded image as a function of the number of quality layers, and wherein the perception quality information is represented in the form of a cursor illustrating the number of layers corresponding to each quality mode, displayed simultaneously with the decoded digital image signal. These features in combination with the other elements of the claim and the base claim are not disclosed or suggested by the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue

fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Citation of Relevant Prior Art

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

a. Rabbani et al., U.S. Patent No. 6,885,395 discloses the concept of allowing a content creator to define the number of quality modes, each quality mode corresponding to a predetermined number of quality layers (see 130 in fig. 4).

b. Joshi et al., U.S. Patent No. 6,668,090 discloses the concept of allowing a content creator to define the number of quality modes, each quality mode corresponding to a predetermined number of quality layers (see 210 in fig. 2).

c. Joshi et al., U.S. Patent No. 6,785,423 discloses the concept of allowing a content creator to define the number of quality modes, each quality mode corresponding to a predetermined number of quality layers (see 110 in fig. 1).

d. Henry, U.S. Patent Application Publication No. 2004/0170331 discloses the concept of allowing a content creator to define the number of quality modes, each quality mode corresponding to a predetermined number of quality layers (see S5 in fig. 4).
